

Szymon Grabowski

DevOps Engineer

Racibórz, Poland | Remote | grabowski.szymon@proton.me
szymongrabowski.dev | linkedin.com/in/szymon-grabowski

PROFESSIONAL SUMMARY

I work as a DevOps Engineer. I design AWS infrastructure as code, automate server configuration and application deployments, and set up monitoring and runbooks. Before that I spent a year maintaining IT systems in Żabka Polska's logistics operations; I also build and run my own application on a VPS.

PROFESSIONAL EXPERIENCE

DevOps Engineer | CloudForge

03.2026-present | Remote

- Design AWS infrastructure as code (IaC) with Terraform/Terragrunt; separate environments and use remote state.
- Configure VPC networking, IAM policies and access to AWS services.
- Write Ansible roles for Linux and administration scripts in Python and Bash.
- Build GitHub Actions/GitLab CI pipelines that build Docker images, push them to ECR and deploy to EKS with Helm/Argo CD.
- Set up monitoring and alerting in Prometheus, Grafana and Alertmanager; write runbooks.

DevOps Mentoring Program | CloudForge

09.2025-03.2026

- Developed AWS, CI/CD, Kubernetes and monitoring skills under the mentorship of senior engineers.

IT Operations Specialist | Żabka Polska

09.2024-09.2025

- Maintained IT systems in a logistics environment and supported users.
- Diagnosed incidents, identified root causes of failures and escalated complex issues.
- Documented fixes for recurring failures and the procedures for handling them.

PROJECTS

Own application and infrastructure on a VPS

- Launched my own application on a Linux VPS running a k3s cluster.
- Automate deployments with GitHub Actions and Helm; manage them in Argo CD and keep the configuration versioned in Git.
- Set up monitoring in Prometheus and Grafana and log collection in Loki.

Portfolio and project write-up: szymongrabowski.dev

TECHNICAL SKILLS

AWS: Configure EC2, S3, RDS, EKS, ECR, VPC, IAM, Route 53 and CloudWatch.

Infrastructure as Code (IaC): Design AWS environments in Terraform/Terragrunt; separate configuration and remote state.

Ansible, Python, Bash: Automate Linux configuration and write administration scripts.

CI/CD and Git: Build GitHub Actions/GitLab CI workflows; version changes in Git.

Docker and Kubernetes: Build Docker images; deploy applications to EKS/k3s with Helm and Argo CD.

Monitoring and logs: Configure Grafana Cloud, Prometheus, Grafana and alerting; collect logs in Loki.

Linux and networking: Administer Ubuntu/Debian; configure VPC, DNS and IAM policies.

EDUCATION

WSB Merito University | 10.2025-02.2029 (in progress)

Computer Science, BEng; Cloud Developer specialisation
